

Organization 21C

Corporate management and business has moved into the 21st century somewhat uncomfortably with the tragedy of September 11th and the scandals of Enron, WorldCom, etc. In his latest edited volume, *Organization 21C*, Subir Chowdhury offers a roadmap for managers covering all pertinent stops for the organization of the 21st century — leadership, process, people, and organization. From the principles of two-sided accountability to situational and personal bases of power, the ideas covered in this volume will challenge traditional and conventional thinking leaving managers enlightened and encouraged by the possibilities of the future.
